Open to Remote & Relocation

PROFESSIONAL SUMMARY

Senior Full Stack Engineer and Technical Lead with 7+ years of experience building high-scale web products with Angular, React, Node.js and TypeScript across connected-vehicle telematics, logistics, smart-metering utilities and B2B SaaS. Led teams of 5–8 engineers shipping platforms used by **500K+ connected vehicles**, **250K+ users** and **3.3M+ utility consumers**. Proven record of zero-to-one delivery (five platforms built from scratch), performance engineering (**85% faster** live fleet tracking), platform modernization and security hardening (**passed VAPT audit**). Owns features end to end, from UI architecture and REST APIs to payments, SSO and production support.

KEY ACHIEVEMENTS

- **~85% faster live tracking** on My Eicher: cut load time for 1,600+ vehicle fleets from 20+ seconds to ~3 seconds.
- Closed **15+ VAPT security findings** on My Eicher; the application **passed the audit**.
- Built **5 platforms from scratch**, including two PGVCL platforms serving **3.3M+ consumers** and **10,000+ field technicians**.
- Scaled the WhatsApp platform to **1M+ messages a month**; payment services handle **1,000+ payments a month**.
- Rendered a POI heatmap of **7,000+ points in ~1 second** on the C&M Control Tower.
- Single-handedly built the **Subscription Tool (150+ APIs)** and migrated it **entirely from MySQL to PostgreSQL**; led the **Angular 9 → 15 upgrade** and **GitLab → GitHub migration**.

TECHNICAL SKILLS

Frontend: Angular (9–19), TypeScript, JavaScript (ES6+), RxJS, NgRx, React.js (18/19), Redux Toolkit, Next.js, React Router, React Hook Form, HTML5, CSS3, SCSS, Tailwind CSS, Angular Material, Material UI, Ant Design, Bootstrap, Angular SSR, i18n (ngx-translate)

Backend & Databases: Node.js, Express.js, LoopBack, RESTful API Design, JWT, bcrypt, Rate Limiting, Cron Jobs / Schedulers, Botpress, PostgreSQL, MySQL, IndexedDB, Database Migration (MySQL → PostgreSQL)

Real-Time, Maps & Charts: WebSockets (STOMP), Google Maps API, HERE Maps API, Marker Clustering (Google & HERE Maps), Heatmaps, Chart.js, Highcharts

Security & Identity: SAML 2.0 SSO, Microsoft ADFS, Active Directory / LDAP, RBAC, HMAC-SHA256 Request Signing, AES Encryption (CryptoJS), OWASP / VAPT Remediation, Security Headers, Code Obfuscation, OTP Authentication

Integrations: CCAvenue, Razorpay, BillDesk, WhatsApp Business API, Firebase, Gamooga, Bitly

Architecture & Practices: Modular / Lazy-Loaded Architecture, Reusable Component Libraries, State Management, Multi-Tenant SaaS, Server-Side Rendering, Responsive Design, Performance Optimization

DevOps & Tools: Git, GitHub, GitHub Releases, Semantic Versioning, GitFlow, GitLab, Docker, Nginx, Contabo, Vite, Webpack, JIRA, Postman, ESLint, Prettier, Claude Code

Leadership & Process: Team Leadership, Mentoring, Code Reviews, Agile / Scrum, Sprint Planning, Estimation, Requirement Analysis, Stakeholder Management, UAT, Release Management, Production Support

PROFESSIONAL EXPERIENCE

Sampark Softwares Pvt. Ltd. | Gurugram, India — **Jun 2021 – Present**

Team Lead – Full Stack (JavaScript) — Oct 2023 – Present

Sr. Software Engineer — Jun 2021 – Sep 2023

- Lead teams of 5–8 engineers across 9 enterprise products for VE Commercial Vehicles (Eicher), PGVCL and Sampark's own ITSM, Subscription and WhatsApp products; own architecture, estimation, sprint planning and delivery.
- Run client requirement sessions, translate business needs into technical designs, and drive QA and UAT cycles through to production releases, hotfixes and production support.
- Mentor developers, review pull requests and set coding standards (ESLint, Prettier, shared component libraries) across Angular, React and Node.js codebases.
- Own source control and release management on GitHub: GitFlow-style branching (feature, bugfix, hotfix, release), pull-request reviews, **80+ semantic-versioned release tags with release notes**, and promotion through dev, QA, pre-prod and production.

Key Projects

My Eicher – Connected Vehicle & Fleet Management Platform | *VE Commercial Vehicles (Eicher)* — Jan 2022 – Present

- Lead development of Eicher's flagship telematics portal serving **500K+ connected trucks and buses** and **250K+ fleet owners, dealers and internal users**, spanning 120+ Angular modules and 470+ components.

- Cut live-tracking load time for large fleets (1,600+ vehicles) from **20+ seconds to ~3 seconds (~85% faster)** by reworking how vehicle data is fetched and rendered.
- Built core fleet modules: live tracking, trace and playback, geofencing, POI and route management, alert dashboard, fuel refill/drain and DEF analytics, cargo and reefer monitoring, vehicle immobilizer, uptime, service bookings and scheduled email reports.
- Built real-time Live Cluster dashboards streaming vehicle telemetry over STOMP WebSockets, and EV modules — battery health, charging management, EV performance comparison — plus CNG/LNG fuel support.
- Implemented marker clustering on Google Maps (default and custom) and on HERE Maps for dense fleet views.
- Delivered fleet analytics — Fleet Insights KPIs, vehicle comparison, driver coaching, growth and green-savings reports — with Excel and PDF exports.
- Implemented persona-based RBAC (module- and tab-level) for customer, dealer, CSM, super-user and VECV roles; built driver onboarding (Saarthi) with verification and bulk upload, consent management and multi-fleet support for non-Eicher vehicles.
- Built digital payments: Eicher Live subscription purchase, SMS/email payment links for the service desk, proforma invoices, coupons and configurable link validity, backed by a Node.js CCAvenue service (encrypted requests, webhooks, call-centre payment links, status reconciliation) processing **1,000+ payments a month**.
- Delivered ADFS (SAML 2.0) single sign-on for VECV employees through a Node.js service, and the frontend for a voice-enabled Connected AI assistant (voice recording, session APIs) and web chatbot.
- Led VAPT remediation closing **15+ findings**: HMAC-SHA256 signing of all API calls, secure document and image URLs, encrypted query parameters, hardened sign-up and password-reset flows, file-upload restrictions, secured admin APIs, security headers and obfuscation — the application **passed the audit**.
- Modernized the platform: Angular 9 → 15 upgrade, GitLab → GitHub migration, migration of deprecated HERE Maps APIs across 10+ modules, removal of hard-coded keys, and Nginx gzip and security-header tuning.

Tech: *Angular 15, TypeScript, RxJS, Node.js, Express.js, LoopBack, STOMP WebSockets, Google Maps, HERE Maps, Chart.js, Highcharts, ExcelJS, jsPDF, Firebase, SAML 2.0 / ADFS, CCAvenue, Docker, Nginx*

VTS – Vehicle Dispatch & Tracking System | *VE Commercial Vehicles (Eicher)* Mar 2026 – Present

- Built from scratch and lead a React 19 + TypeScript logistics platform tracking **12,000+ vehicles a month** from plant to dealer, with 8 role-based portals (admin, plant operations, QC, security, yard, sales, dealer, transporter) on protected, role-based routing.
- Built live Google Maps tracking, vehicle assignment, secondary movement, yard management, gate security and QC workflows, plus plant and yard user mapping.
- Built ePOD (electronic proof of delivery) with discrepancy drill-downs, freight billing, accident and breakdown management, and SRN, PRN, RGP and POP document workflows.
- Built a reusable reporting framework powering **15+ SLA, lead-time, ePOD-compliance and exception reports** with user-customizable columns, multi-select filters, drill-downs and Excel export; added role-specific dashboards for admin, sales, dealer and transporter users.
- Secured the app with ADFS SSO, HMAC-signed APIs and build-time JavaScript obfuscation; added a global loader, duplicate-click prevention and shared UI components.

Tech: *React 19, TypeScript, Vite, Tailwind CSS, Redux Toolkit, React Router, React Hook Form, Axios, Google Maps API, Chart.js, ESLint, Prettier*

C&M Control Tower – Haulage & Mining Fleet Operations | *VE Commercial Vehicles (Eicher)* Oct 2024 – Present

- Built from scratch an Angular control tower for construction and mining fleets, including a POI heatmap that renders **7,000+ points in ~1 second**, live fleet map and grid views with marker clustering, live productivity, uptime and utilization dashboards, and WebSocket-driven live clusters.
- Built trip operations and status updates, ticket creation and tracking, ePOD, alert and target-threshold configuration, vehicle group management, profile settings, and export and search across modules.
- Integrated WhatsApp (WABA) notifications and HMAC-signed API requests, and made the full UI responsive.

Tech: *Angular 15, TypeScript, RxJS, STOMP WebSockets, Google Maps API, Highcharts, Chart.js, Angular Material*

Subscription Tool – Loyalty & Payments | *Sampark Softwares product, for Eicher* Jul 2023 – Present

- Single-handedly built Sampark's Subscription Tool from scratch: a Node.js/Express backend with **150+ REST APIs** for subscription plans, a rule-based coupon engine, master and child wallets, loyalty points, promotions and extended warranty, plus an Angular admin console.
- Integrated Razorpay and CCAvenue with dynamic plan pricing, GST/TDS calculations, invoices, proforma invoices and EY (Ernst & Young) finance data sync; exposed payment-link APIs consumed by the WhatsApp platform and My Eicher.
- Built a nightly scheduler that reconciles pending payment statuses, plus vehicle-data sync jobs that push subscription status to My Eicher.
- Migrated the **entire application from MySQL to PostgreSQL** across all 150+ APIs; secured APIs with JWT session validation, bcrypt hashing and rate limiting, and fixed connection-release and logging issues for stability.

Tech: *Node.js, Express.js, PostgreSQL, MySQL, Angular 13, JWT, bcrypt, Razorpay, CCAvenue, node-schedule, log4js*

WhatsApp Business API Platform | *Sampark Softwares product, for Eicher* Jun 2021 – Present

- Built and scaled Sampark's WhatsApp product for Eicher's customer engagement, handling **1M+ messages a month**, backed by 110+ Node.js APIs for service booking, breakdown reporting with live location, job-card repair status, invoice PDFs, payment links, feedback and Sev-1 incident alerts.

- Delivered template-based marketing campaigns for truck and bus launches (Pro 2049, Pro 2059, Pro 2114XP, Skyline Pro) in English and Hindi, with images, brochures, videos and call-to-action buttons.
- Integrated delivery-report (DLR) tracking, Gamooga analytics, a ticketing tool and Bitly short links, with Angular web views for location sharing, repair status and graphs.

Tech: *Node.js, Express.js, Botpress, Angular, PostgreSQL, MySQL, WhatsApp Business API, JWT*

Smart Meter Warehouse & Workforce Management (WFM/WHM) | *PGVCL* Mar 2025 – Present

- Architected from scratch an Angular 16 platform (85+ lazy-loaded modules) managing the full lifecycle of **3.3M+ smart meters** for **10,000+ field technicians**.
- Built the inventory lifecycle: GRN-based inventory upload, warehouse intake and pooling, physical, technical and NABL accuracy testing, segregation, dispatch against MRN, installation (MI, CI, NMI), damaged meters, repair orders and OEM returns.
- Built L1/L2/L3 approval workflows with action-taken reports, a hindrance register, seal management, SIM/modem assignment, surveyor management, MDM/HES sync, ageing reports and role-wise dashboards.
- Implemented persona-based RBAC, audit logs, OTP login, HTTP interceptors and route guards, and hardened the app with 30-minute idle auto-logout, dev-tools blocking, code obfuscation and security headers.

Tech: *Angular 16, TypeScript, RxJS, Angular Material, Bootstrap, IndexedDB, Firebase, CryptoJS, javascript-obfuscator*

Smart Meter Consumer Portal | *PGVCL* Jul 2025 – Present

- Built from scratch an Angular 19 server-side-rendered (SSR) portal for **3.3M+ electricity consumers**: dashboards, daily/weekly/monthly usage analytics, load-profile graphs, contract load and maximum demand, debt management and remote meter display.
- Built prepaid and postpaid billing with BillDesk payments, quick recharge without login, bill payments with invoice tracking, payment history and multi-account management.
- Delivered complaints and service requests, notifications, feedback, office locator and FAQs in English, Hindi and Gujarati, plus an admin console for users, meter usage, payments, reports and SMS logs; hardened with security headers and obfuscation.

Tech: *Angular 19, Angular SSR, TypeScript, Express.js, ngx-translate, BillDesk, Chart.js, Angular Material*

ITSM & ITAM SaaS Platform | *Sampark Softwares product, 8+ clients* Mar 2025 – Present

- Lead development of Sampark's multi-tenant ITSM/ITAM product used by **8+ enterprise clients**: incident, service-request and change-management lifecycles, dynamic forms, knowledge base, announcements, organization hierarchy and location masters.
- Built the SLA engine — severity levels, SLA calculation rules, escalation matrix, holidays and rosters — with real-time admin dashboards over WebSockets, NgRx state management and reports.
- Built IT Asset Management: assets, accessories, consumables, licenses, suppliers, requestable and assigned items, bulk import, custom fields and system-information sync via UEM APIs.
- Extended the open-source Sim workflow builder (Next.js 16, React 19, TypeScript) into a white-labeled **no-code ITSM rule designer**: custom nodes for AND/OR approver and assignee groups, escalations and duplicate checks, compiled to JSON for the ITSM process engine.
- Integrated SSO (ADFS) and Active Directory login, token-based auto-login, tenant provisioning and single sign-out between ITSM and the rule designer, and published an API integration guide for client systems.

Tech: *Angular 16, NgRx, RxJS, TypeScript, Bootstrap, STOMP WebSockets, Quill, Next.js, React 19*

Multi-Client Web Chatbot Platform | *Sampark Softwares* Jul 2023 – Sep 2024

- Built a single React codebase that delivers **10 white-labeled web chatbots** for clients including Eicher (HR, Trucks & Buses, Eicher Live), MHL, One Stop Dental, Karam and Varuna, integrated with the Botpress Converse API.
- Built rich message UI — cards, carousels, forms, date pickers and rich-text input — with auto-login, personalized responses, notifications and robust error handling.

Tech: *React 18, Redux Toolkit, Material UI, Ant Design, Axios, Botpress, Webpack*

Career Break | Family health responsibilities during COVID-19 **Dec 2019 – May 2021**

HID India Pvt. Ltd. | Bengaluru, India **Jan 2018 – Nov 2019**

Technical Consultant Nov 2018 – Nov 2019

Software Trainee Jan 2018 – Oct 2018

- Built a React/Redux banking portal with 2-step verification login, payee management and device registration for secure transactions.
- Built healthcare portals for doctors (appointment approvals, patient history, prescriptions) and patients (appointment booking, prescription history, profile).
- Designed ID card templates for client identity-credential programs.
- Promoted from Software Trainee to Technical Consultant within 10 months.

EDUCATION

Master of Computer Applications (MCA) | GLA University, Mathura Jul 2016 – May 2018

Bachelor of Computer Applications (BCA) | GLA University, Mathura Jul 2013 – May 2016
